

manual 1

Preparations for use

For manuals in other languages see www.firsty.nu

Remove any superfluous rest part from the foam parts

Tear off the vertical slip and then carefully tear away the photo sheet.

Cut small and large photo to cover the indicated circles slightly. Then stick them to the photo sheet. The indentation indicates the top of the photo sheet.

Insert the photo sheet between foam and reverse side of box.

Pay attention to the position of the indentation of the photo sheet.

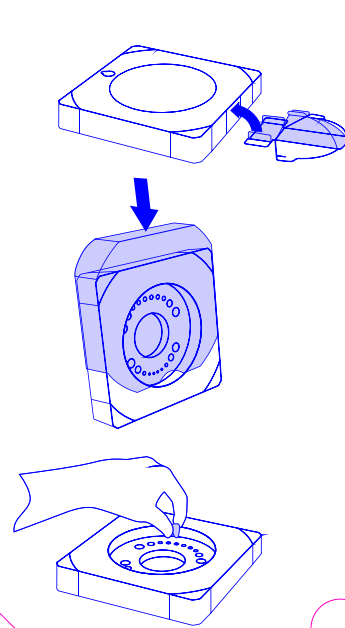

Close the box with the tab.

Tear off the horizontal slip with your language and fold it into a log booklet.

This booklet can be stored at the reverse side of the Firsty by inserting it between the box and the sleeve.

The indentation of the booklets should point upwards.

manual 2

Fold the foot as indicated and hook both closing slips together. Fix the foot underneath the Firsty. Choose which side will be your front.

In order to close; slide the sleeve over the box. Enjoy!

Storage of teeth and molars.

Cleaning and preparation.

Clean tooth or molar with water and toothpaste or non-aggressive cleaning agent, for instance a chlorine solution in a light concentration.

Plug the sink and in this way prevent the tooth or molar from washing away.

You can prevent the tooth and molar from dehydrating by spraying it with hairspray.

Placement in the Firsty

Read the proper tooth number of the tooth or molar using the milk tooth card and place the tooth or molar in the proper hole in the foam holder.

The foam is to adjust itself to the tooth or molar, if necessary, press the tooth or molar again after some time for proper insertion.
