Manual Firsty Round Toothboxes

Preparations for use
For manuals in other languages see
www.firsty.nu

1. Take off the lid and remove the foam ring from the box. Remove any superfluous rest parts from the foam ring. Remove the adhesive protection strip.

2. Cut a small photo to the size of 3,5x3,5 cm. Then stick this photo to the centre of the bottom of the box, using the central glue blob. Press slightly to affix.

3. Place the foam ring back into the box. Attention: the arrow should point upwards! . Press slightly to affix over the 2 outer glue blobs. These blobs allow removing and placing the foamring a few times.

4. Fill out the front page of the Firsty logbook.

5. Placement in the Firsty
Read the proper tooth number of the tooth or molar using the milk tooth card and place the tooth or molar in the proper hole in the foam holder.
The foam is to adjust itself to the tooth or molar. If necessary, press the tooth or molar again after some days for proper insertion.
If a teeth has sharp rims insert it into the hole from the back side of the foam ring.
If you wish you could use some glue at the back for a final fix of the teeth to the foam.

Storage of teeth and molars.
Cleaning and preparation.
Clean tooth or molar with water and toothpaste or non-aggressive cleaning agent, for instance a chlorine solution in a light concentration.
Plug the sink and in this way prevent the tooth or molar from washing away.
You can possibly prevent the tooth and molar from dehydrating by spraying it with hairspray.

1.

Firsty Round NameRing (can be ordered separately)

Lid

Foam ring

Glue blobs (3x)

Box

2.
